Help and Feedback

If you would like to learn more about the new BrightAuthor features described below, please download the [User Guide](#). If you are new to BrightAuthor, you can also visit the [Tutorial Videos](#) page. If you have any questions, please contact us at support@brightsign.biz.

Changes Since 3.7.0.37

New Features

- Up-to-date localization support for the following languages: Chinese (simplified), French, German, Italian, Japanese, Portuguese, Russian, and Spanish

Bug Fixes

- Attempting to disable the Diagnostic Web Server during the unit setup process will now work in all cases. Previously, the Diagnostic Web Server would not be disabled if the player was previously set up with it enabled.
- Re-uploading an edited HTML file via Simple File Networking will no longer cause a 404 error when a player attempts to download the new version of the file.
- Timeout events no longer break Time Code events that are assigned to the same state.
- Creating an empty Video Time Code event and reopening the presentation will no longer cause interactive playlist graphics to disappear.
- Adding a Plugin script to a new presentation that has no initialized User Variables will no longer cause a player to crash when it attempts to play the presentation.

Improvements

- BrightAuthor can now call off Reboot Unit actions sent to players on the BrightSign Network before those actions are carried out.
