

BrightSign Tech Note

How to Convert VGA Output to Standard Definition Displays in NTSC or PAL

With FW 3.5.68 and above, you can now set your BrightSign unit to connect to Standard Definition displays via Composite in either PAL or NTSC. To do so, simply follow these steps:

1. Plug an RCA/composite connector/cable to the BrightSign component (Blue) middle connector of your HD1010 or HD810
2. Plug the other end of this cable into the Composite input of your display
3. Add the custom autorun file to your BrightAuthor project to set the output to PAL or NTSC

Please contact support@brightsign.biz to obtain the required autorun to enable this feature.
